MEMORANDUM FOR: Deputy Director for Science and Technology
SUBJECT: Continuation of ELINT Analyst Slot at PEC

1. At this late date I would like to recommend a DD/S&T position for retention of the Analyst slot at PEC. I recognized that it was at my initiative that the original consideration for removing the slot was begun.

2. When I first considered removing the slot I felt that the major CIA input to PEC would be only from the infrequent "I" operations. I recognized also that delivery of the WHITE DOVE II automatic data processing equipment would require some continuing support from CIA but felt that this could be accomplished by TDY. These two items did not seem enough to warrant a full-time analyst assignment.

3. These requirements remain and recently four things have caused reconsideration of my position:

25X1A a. The strong reaction from PEC and CINCPAC.

c. The probable extension of the "O" operation under CIA control. It is believed that if this should occur, utilization in the Pacific will be required at least occasionally.

d. The paucity of information to be used as the basis for development of countermeasures against

4. Should the slot be retained, I would propose to assign [REDACTED] to this position to replace [REDACTED]. I think Eldon is just about optimum for the job since he was the engineer in charge of the development of the WHITE DOVE II system; is a fine engineer and ELINT analyst; and is a real member of the CIA team even though in Air Force uniform. He has indicated to me that he would request (and thinks receive) an extension of active duty and of his assignment to OEL if the PEC assignment is offered to him. He may also be willing to recall his request for retirement and remain with OEL at Headquarters, but he has not made this entirely positive at this point.

5. I recommend that [REDACTED] be requested to secure retention of the slot if at all possible. I have previously talked to Bob on the subject.
